

Lesson 2: Cultural Rhythms

- Focus: Engaging with global rhythmic traditions (e.g. Afro-Cuban clave, West African bell patterns, reggae syncopation) through active listening, clapping or tapping, and database searching.
- Core Feature Used: The global “Rhythm Bank” (browsing, listening, clapping or tapping back) and the reverse “Identify / Search” feature.

1) Objective

Students will explore, perform, and analyze rhythmic frameworks originating outside the Western classical canon, using the interactive Rhythm Bank to understand how rhythm structures cultural identity and cross-genre musical expression.

2) Pedagogical Rationale

This lesson moves beyond the confines of standard European concert band repertoire. Instead of treating music technology as a static machine used for assessment, it transforms the app into an open, living archive of global musical knowledge where students can encounter, identify, and respect diverse sonic lineages.

2) Lesson Flow

- Step 1: Exploring the living Rhythm Bank
 - The teacher projects the app and opens the Rhythm Bank module.
 - The class explores pre-loaded cultural rhythms, such as the 3-2 Son Clave pattern or a standard reggae on-drop groove.
 - Students listen to the audio playback, view the notation alongside cultural context notes, and use the Clap or Tap Back interactive verification feature to test their physical groove and timing against the native rhythm.
- Step 2: Student-Brought Cultural Rhythms
 - Students bring in rhythmic patterns from music they consume outside of school (hip-hop beats, Latin pop grooves, folk rhythms from their heritage).
 - Using the Identify / Search input tool, students clap or tap an unfamiliar rhythm they heard in a track. The database searches the Rhythm Bank, returning matching notation, cultural origin information, and audio playback.
- Step 3: Teacher-Curated Extension
 - The teacher pushes the newly indexed teacher-added rhythm into the active sight-reading generator queue, allowing the class to practice sight-reading syncopated patterns drawn directly from global traditions rather than as textbook exercises.
