

Lesson 3: Teacher-Imported Repertoire

- Focus: Bridging isolated sight-reading drills directly to the music the ensemble is currently rehearsing for performance.
- Core Feature Used: Custom repertoire seeding and generative variation parameters.

1) Objective

Students will isolate, deconstruct, and build fluency in tricky syncopated rhythmic passages extracted directly from upcoming concert repertoire, using generated practice variants as practice before encountering the full score.

2) Pedagogical Rationale

Generic educational software often fosters learned passivity by presenting practice in a vacuum, completely disconnected from the actual collaborative work of the ensemble. This lesson resists isolated drill culture by seeding the tool with real ensemble challenges, turning Rhythm Reader into a responsive tool that serves the ensemble's artistic goals. This format also provides flexibility in how practice culture is disseminated, moving away from the traditional teacher-student and allowing for student-student or even student-as-individual practice.

3) Lesson Flow

- Step 1: Repertoire Diagnosis
 - During rehearsal of a challenging new piece, the teacher identifies a recurring bottleneck where students struggle with the rhythm.
- Step 2: Seeding Rhythm Reader
 - Instead of using a random factory generator preset, the teacher inputs the core rhythmic cell (measure 34 for example) into the teacher portal.
 - The app generates a customized Practice Playlist consisting of micro-variations of that specific rhythmic cell (changing the tempo, shifting accents, or varying surrounding subdivisions).
- Step 3: Ensemble Work & Corrective Feedback
 - Students open the seeded session on their devices or on devices provided to them.
 - When mistakes occur, the app's redesigned feedback mechanism moves beyond a binary pass/fail grade; it prompts students with strategic suggestions (e.g., "Notice the tied eighth note across beat 3 - try subdividing before playing again").
 - The ensemble reconvenes to play the passage in the actual piece. The teacher makes sure to connect the practice to any success that occurs during practice of the piece.
